SunMaster / UVA SunSystems, Inc.
6208 Technology Dr., Browns Summit, NC 27214
1-800-274-1744 sales@hottan.com

Individuals: TanningBeds4Less.com
Salons: TanningLamps4Less.com

Instructions

This kit is easiest to use when you are already changing your lamps, but you should use it every 150 to 250 hours of use. For home tanning bed owners, once a year is best.

1. Unplug your tanning bed. Remove the canopy acrylic according to the directions found in your owners manual. Lean it against a wall for easy access. You will be treating both sides of each acrylic using a soft, damp cloth.
2. Begin by using Novus #3 (heavy scratch remover) on any heavily scratched areas, if needed.
3. Next use Novus #2 over the entire acrylic surface, both front and back. Do this as you would wax a car, rubbing in circles covering every square inch. The goal is to strip away a microlayer of the acrylic. Let dry, then wipe with a clean dry cloth, making sure to remove all of the cleaner.
4. Prepare a spray bottle of tanning bed acrylic cleaner using the instructions on the concentrate in your kit. Clean both sides of your acrylic with this solution, removing all remaining Novus product. Let dry.
5. Remove the lamps from the canopy, set them to the side. Clean the aluminum reflectors in the tanning bed (if equipped) with the acrylic cleaner solution. Next you wipe each lamp using a slightly damp cloth before installing
6. Once you have cleaned your reflectors and lamps, and have reinstalled the lamps, you can reinstall the acrylic in the canopy of your tanning bed. You are now done with half of your tanning bed.
7. Repeat this same process for the bench of the tanning bed. Cleaning the bench takes a little longer because it is more likely to get scratches or a film from lotions.

7. Repeat this same process for the bench of the tanning bed. Cleaning the bench takes a little longer because it is more likely to have scratches.

8. Once your bed is fully reassembled, spray the surface of both the canopy and bench acrylics with Novus #1 and polish with a soft dry cloth. You will use this polish every day (salons) or 1 to 2 times per month (home users).

9. Plug your tanning bed back in, and start enjoying the best tan of your life!

Since you own a tanning bed, you are now a member of our exclusive online shopping site: Club Tan. It is a restricted website that requires a login and password. You can visit it at www.hottans.com and use this info when it prompts you to log on. You will need this login info each time you visit.

Here you can save 30% to 80% off retail everyday, with specials and brands you can't find on the regular website.

Be sure to check out the back of this guide for money saving coupons! Thanks again, and happy tanning!

Quick Tips

Never use household cleaners on your acrylics. They cost more and will damage your acrylics and reduce the output.

Using the rebuild kit at least once a year will increase the UV output by 20% to 40%, a smart investment that pays off every time you tan.

You MUST use eyewear. Just closing your eyes will not protect your eyes from UV, and can cause headaches and vision problems.

Baby oil and other common lotions will damage your acrylics over time. Use only lotions made for "indoor tanning beds".
